## **Digital Contact Tracing Tools for COVID-19**

Digital contact tracing tools **vary in purpose**, **features**, **and complexity**, but they can add value to traditional contact tracing efforts by:

Improving the efficiency and accuracy of data management and automating tasks;

**Reducing the burden** of data collection on public health staff by **allowing electronic self-reporting** by cases and contacts;

Using location data to **identify community contacts unknown to the case** to look at possible exposure.

Public health staff may have different contact tracing challenges, making a one-size-fits-all solution unlikely. Below are some items to consider when selecting the best tool for contact tracing.

Primary Purpose			
		Case Management	Proximity Tracking
		Tools to capture data on cases and contacts; some allow for automated notification and follow-up	Tools that use Bluetooth or GPS to track an individual's exposure to cases; used in addition to contact tracing case management tools
Primary User	PHAs	PHAs collect information on cases and contacts and follow up when necessary	PHAs receive information that users choose to share to enhance contact tracing
	Cases and Contacts	Users report symptoms and contacts and can receive information	Users elect to share data and are alerted if they have been close to a COVID-19 case
	Key Points	<ul> <li>Ability to receive information from COVID-19 data systems through importation or automated means</li> <li>Allow for automated notifications and follow-up</li> </ul>	<ul> <li>Proximity-sensing technologies that preserve personal privacy are still under development by many groups across the country</li> <li>Requires community-wide adoption</li> </ul>

## What is CDC doing?

- ✓ Conducting a landscape analysis and evaluation of contact tracing tools;
- ✓ Generating preliminary tool recommendations for piloting tracing in areas with limited introduction of COVID-19;
- ✓ Coordinating with public health agencies, healthcare organizations, academic institutions, non-profit organizations, and private companies to maximize contact tracing effectiveness.
